of Technology

PROFESSIONAL SUMMARY

Motivated and detail oriented Data Analyst student with a strong foundation in data cleaning, visualization, and business intelligence. Skilled in SQL, Python, Excel, and Tableau/Power BI, with experience in analyzing datasets, creating dashboards, and extracting meaningful insights to support decision making. Passionate about solving real world problems through data driven approaches and continuously learning new analytical tools and techniques. Strong problem solving abilities, analytical thinking, and a keen interest in transforming raw data into actionable business insights.

EDUCATION

Bachelor of Technology (Artificial intelligence)	2024 - 2028
Newton School of Technology, Rishihood University	Grade: 8.3/10.0
Intermediate (Class XII)	2023 - 2024
Resonance Junior College	Grade: 92.6%
Matriculation (Class X)	2021 - 2022
Narayana Concept School	Grade: 9.7/10.0

PROJECTS

Wildfire Analysis Dashboard ([Github](#)) April 2026

- Developed a **Wildfire Prediction Risk Analysis Dashboard** using **Python, Pandas, NumPy, Excel/CSV, and Tableau** to analyze wildfire patterns and identify high-risk regions based on temperature, humidity, wind speed, rainfall, and fire occurrence trends.
- Performed **data cleaning, preprocessing, and feature engineering** using Python by handling missing values, removing duplicates, standardizing environmental variables, and creating calculated fields like **Fire Risk Level, Severity Score, and Weather Impact Score** for deeper predictive analysis.
- Built **interactive Tableau dashboards** with KPIs, univariate, bivariate, and multivariate visual analysis, enabling insights on wildfire-prone zones, seasonal fire trends, weather-risk relationships, and severity patterns through dynamic filters and decision-focused storytelling.

Airbnb Dashboard ([Github](#)) ([Demo](#)) April 2026

- Developed an **Airbnb Client Decision Dashboard** using **Python, Pandas, NumPy, Excel/CSV, and Tableau** to help users choose the best Airbnb stay based on budget, location, room type, and demand.
- Performed **data cleaning, preprocessing, and feature engineering** using Python by handling missing values, removing duplicates, standardizing data, and creating calculated fields like **Price Category, Demand Score, and Value Score** for deeper analysis.
- Built **4 interactive Tableau dashboards** with KPIs, univariate, bivariate, and multivariate visual analysis, enabling insights on pricing trends, best-value neighborhoods, customer demand patterns, and stay preferences through dynamic filters and client-focused storytelling.

Stock Price Model ([Github](#)) ([Demo](#)) March 2026

- Developed an end-to-end stock prediction pipeline by cleaning 100,000+ rows of multi-ticker financial data and engineering key technical indicators.
- Trained machine learning models to predict next-day closing prices and generate actionable market insights for financial decision-making.
- Implemented Agentic AI features such as autonomous market analysis, anomaly detection, smart report generation, personalized investment recommendations, and portfolio optimization workflows.

SKILLS

Computer Languages: Machine Learning, TypeScript, HTML, CSS, JavaScript, Python, SQL

Data Tools: PostgreSQL, Power BI, TensorFlow, NumPy

Software Packages: Pandas, Matplotlib, Figma, Tailwind, Next.js, Tailwind CSS, Next JS, Prisma ORM, React, Node.js, Excel, Express JS, MySQL, MongoDB

Additional Courses: Data Structure

Soft Skills: Public speaking, Research, Communication Skills

Others: Git and Github, Firebase, UI/UX, Analytics, LangChain, OpenAI API, API testing, GenAI, LangGraph, Hugging Face, Tableau, AWS, LLM, Generative AI
